AUTHOR: Andrzejewski, S. (Andrzheyevski, S.)

TITLE: The importance of conventional superheaters in nuclear power stations in the coming decades

SOURCE: Nukleonika, v. 9, no. 7-8, 1964, 503-509

TOPIC TAGS: nuclear power station, superheater, nuclear reactor, gas cooled reactor, water cooled reactor, graphite moderated reactor, organic moderated reactor

ABSTRACT: The use of conventional superheaters in nuclear power stations is analyzed and it is claimed that the usual disadvantages of pressurized water, boiling water, and heavy water moderated and cooled reactors can be overcome by superheating the saturated steam in superheaters fired by oil, gas, or coal. For example, the overall efficiency of the Bielojarsk Station was stated to be 33%, with the following parameters: the reactor is graphite moderated and water cooled, the pressure in the first circuit is 150 atm, the pressure of

ACCESSION NR: AP4045661

the secondary steam in the heat exchanger (heated by the primary steam) is 100 atm, this steam is superheated in the reactor to a temperature of 510C, then is fed to a standard WK-100 turbine at 90 atm and 500C. It is claimed that the efficiency of this station could be raised to 37% or even higher by suitable fossil fuel fired superheating. The application of such superheaters and reheaters in combined power stations with pressurized water reactors (PWR), graphite moderated water cooled reactors (BWGR), organic moderated and cooled reactors (OMR), and gas cooled reactors (GCR) is discussed and data obtained from the author's analysis are given in the Enclosure (Table 1). Flow diagrams are presented for the following cases: a pressurized water reactor, an organic moderated and cooled reactor, and a graphite moderated gas cooled reactor. Orig. art. has: 3 figures and 1 table.

Orig Pub: Gruzlica, 1956, 24, No 4, 239-246.

Abstract: In guinea pigs vaccinated with BCG, the development of a tuberculous process is slowed down, particularly in those which were multiply vaccinated. The life span of multiply-vaccinated animals exceeded by more than twice that of the control. A difference between animals vaccinated once or multiply was not determined. In 2 multiply-vaccin-

Humic acid in domestic (Polish) lignite. W. Kuczyński, A. Andrzejak, and L. Ramlau. *Poznań. Towarz. Przyjaciół Nauk, Sér. A*, 6, No. 5, 1-9(1950); *Chem. Zentr.* 1951, II, 2274-5; cf. *C.A.* 43, 1944c, 9413g.—The method of Soucl (cf. *C.A.* 31, 4792[2]) was used in an investigation of the humic acid content of Polish lignite and the results were compared with those obtained by complete alk. extn. The results agreed for total humic acid content; only the compn. of the humic acids varied. The difference lay in the fact that the Soucl method gave lower humic acid values for lignites which had been freed from bitumen by extn. with 2 *N* NaOH. The humic acids extd. with alkali showed larger amts. of alc.-sol. substances, chiefly hymatomelanic acid (I), which had been formed at the expense of the humic acids during the long extn. with 2*N* NaOH. Both methods gave a total humic acid content (humic acid + I + fulvic acid) of 72% calcd. on the dry and ash-free substance without bitumen. Humin compds. and small amts. of lignin, pectins, cellulose, and other substances made up the residue. Humic acid contents reported are 56 and 61%

TITLE: News in Brief

PERIODICAL: Zavodskaya laboratoriya, 1959, Vol 25, Nr 9, pp 1146-1147 (USSR)

ABSTRACT: Ya. I. Kagan and O. I. Bogdanov, Elektromekhanicheskiy zavod, g. Khar'kov (Electromechanical Works, Khar'kov) suggest the use of an apparatus (Fig) to be used for grading steel samples according to trade-marks. The apparatus is based on a difference in the thermoelectric force of the samples. 40Kh and 9KhS, 3Kh15 and 9KhS, Kh12 and Kh12TF steels may be distinguished from one another. Measurement is performed in such a way that a copper electrode heated up to a infinite temperature is pressed on one end of a small test foil, and a second (unheated) copper electrode is pressed on the other end, and the thermoelectric force is measured with a millivoltmeter. P. A. Perkovskiy, Altayskiy traktornyy zavod (Altay Tractor Works) reports on an improved coercimeter of the system UFAN (Fig). A diagram illustrates the new circuit-diagram. Kh. A. Iskhakov, Tomskiy politekhnicheskiy institut (Tomsk Polytechnic Institute) suggests the use of small furnaces

Card 1/3

for differential-thermal analyses, since the performance of such analyses is made possible by their use in plant laboratories. In these furnaces, the heating coil is freely exposed in small ceramic tubes (60 per cent fire-clay and 40 per cent china clay), the latter being contained within a layer of asbestos wool between the inner furnace wall (fire-clay) and the furnace shell (sheet steel). The furnace block has five cavities, two for the sample, two for the standard samples, and one for the thermocouple. A. P. Martirosyan and N. Kh. Avakyan, Yerevanskiy politekhnicheskiy institut (Yerevan Polytechnic Institute) described a tensimeter (Fig). The liquid to be investigated is evaporated in vacuum on the water bath, which causes the vapors to pass into a second glass vessel of the apparatus where they flow about a thermometer, and flow back, after condensation has taken place, into the first glass vessel. As soon as a stabilized circulation has been attained, pressure is read on a gauge, air is passed into the system, and pressure is read. This is repeated 10 to 15 times, and the vapor tension is calculated from the difference between external pressure and vacuum. P. Ya. Andyburs, Krivorozhskiy gornorudnyy institut (Krivoy Rog Mining Institute) designed a measuring instrument for

Card 2/3

wire rope diameters (Fig). The device is provided with two wedge-shaped bits, a movable one and a fixed one. The former is connected with an indicator. The use of wedge-shaped bits reduces the error of measurement to a minimum, which cannot be attained with a conventional micrometer. There are 4 figures.

ASSOCIATION: Elektromekhanicheskiy zavod, g. Khar'kov (Electromechanical Works, Khar'kov). Altayskiy traktornyy zavod (Altay Tractor Works). Tomskiy politekhnicheskiy institut (Tomsk Polytechnic Institute). Yerevanskiy politekhnicheskiy institut (Yerevan Polytechnic Institute). Title : Radioactive Phosphorus Therapy of Some Diseases of the Hemopoietic System.

Orig Pub : Tr. 1-y Zakavkazsk. konferentsii po med. radiol Tbilisi, Gruzmedgiz, 1956, 309-314.

Abstract : Twenty patients (16-myeloid leukosis, 4-lymphoid leukosis, 4 - erythremia) were submitted to P^{32} therapy. Administration of the isotope in doses of 4-8 micro curies gave good therapeutic results in all the patients with erythremia. Some patients with myeloid leukosis improved generally; the therapeutic effect of P^{32} was least remarkable in lymphoid leukosis. The administration

Found that disease of young chickens produced by intracerebral injection of virus of acute human encephalomyelitis resembles human disease and is typical for virus in question. Observed typical changes in the peripheral nerous system (demyelinization, fragmentation, degeneration, and falling out of nerve fibers); productive proliferation of walls of blood vessels in brain, heart, and lungs; demyelinization of nerve fibers of the spine and occasionally of the brain. Describes in detail other changes produced by the disease and discusses its pathogenesis.
